---

### **PRICING:**

\$18 / 50 lbs. bag or \$16 / 50 lbs. bag when buying a pallet (40 bags - 2,000 lbs.)

**PREMIUM ALFALFA CUBES**

**ABOUT THE PRODUCT:**

Alfalfa Hay is a main staple and one of the most highly sought after forages in the world. Grown in the Snake River Basin of Idaho, our Alfalfa Cubes contain some of the highest protein of any forage grown in the United States.

Our area offers the ideal weather conditions for alfalfa. Being a cool season forage, it thrives in the summer with our warm days and cool nights. Our producers use some of the best machinery to reduce leaf shatter and ensure the proper moisture content. It is harvested at early to mid-bloom for great quality while maximizing output. The process of sun curing the hay for 5-7 days is what sets us apart from other brands. This technique eliminates the need to use any binders on our product.

**HERE ARE SOME REASONS TO MAKE THE SWITCH TO CUBEIT:**

**Sun-cured alfalfa hay:** We let it sun-dry and harvest in large bales for storage. When filling an order, we grind the hay for the production of cubes.

**No added dyes:** We store our hay in enclosed buildings or under tarp cover to keep it green and protect from bleaching.

**No sodium bentonite added:** Our cubing process does not require a binder.

**Only top quality:** Our standard of quality is second to none. We will never compromise on the purity of our cubes for profit.

**Our Premium Alfalfa Cubes can be fed to Horses, Mules, Llamas, Cows, Sheep, Goats and Elk.**
